#6852M

#6853M

#685

DARE TO COMPARE

- The Mallory 6A, 6AL, and 6AL2 have the same wire color coding and mounting pattern as MSD's 6A and 6AL analog ignitions for simple replacement
- The Mallory 6AL Ignition has 1 stage of rev-limiting that requires NO chips for adjustment - unlike the MSD 6AL that requires extra-cost chips for specific RPM settings
- The Mallory 6A, 6AL and 6AL2 Ignitions have 19% more spark energy, 10% more primary output voltage and 40% lower energy draw than comparable MSD boxes for maximum performance and reliability

For a complete product comparison of Mallory vs. MSD ignition boxes, visit

www.MalloryRacing.com/Comparison

Redemptions must be submitted by January 31st, 2008. The dead or alive MSD boxes become the property of Mallory Racing and will NOT be returned. MSD is a registered trademark of Autotronic Controls Corporation. Both the use of MSD and the likeness of the MSD ignition box are used for comparative reference only. Void where prohibited.
