

Fidanza

Make plans to visit Fidanza (#20755) at the SEMA Show this year!

Founded in 1997, Fidanza has engineered a decade of excellence with race-proven flywheels, clutches, cam gears and other go-fast parts for sport compact and street performance enthusiasts.

New this year are Twin-Disc Performance Clutches for the Corvette, Camaro, GTO and Mustang. Fidanza's twin-disc clutches tackle up to 800 horsepower while stock pedal pressure is virtually unchanged and engagement feels as smooth as a typical Stage 3 single-disc clutch.

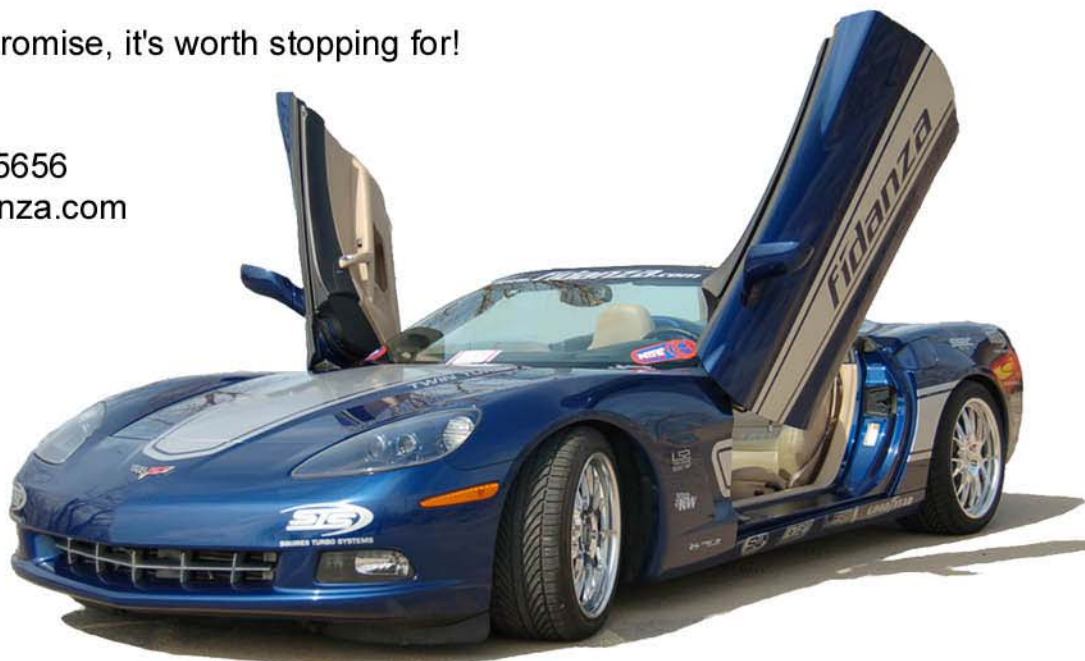

And on display in the Fidanza booth will be the company's newly invigorated Project C6. The STS remote-mount, twin turbo-equipped Vette makes upwards of 900 horsepower and is lavishly appointed with an array of aftermarket accessories including LSD Lambo-style doors, CORSA exhaust, SSBC brakes, DPE wheels, Goodyear tires, Auto Meter gauges and an enhanced LS aluminum block.

We hope to see you at SEMA this year - we've even packed you a gift.

And we promise, it's worth stopping for!
